SASOL NORTH AMERICA

ABOUT SASOL

Sasol is an international integrated chemicals and energy company that leverages technologies and the expertise of more than 30,000 people working in more than 30 countries. We develop and commercialize technologies, and build and operate world-scale facilities to produce a range of high-value product streams, including liquid fuels, chemicals and low-carbon electricity.

In North America, Sasol is building a world-scale petrochemical complex and already has operations in Arizona, Louisiana, Pennsylvania and Texas. Collectively, these sites employ a workforce of approximately 1,500 people and manufacture the primary ingredients in detergents, personal care products, waxes and specialty products used as abrasives, catalysts, thickeners, ceramics and more.

VALUES

Our Sasol Values were specifically written to reflect ownership as well as actionability. This helps us approach our values in a very practical manner.

• We ensure that SAFETY, HEALTH AND ENVIRONMENT is a top priority
• We care for OUR PEOPLE and support their development
• We value and promote DIVERSITY AND INCLUSION
• We act with RESPECT AND INTEGRITY at all times
• We COMPLY with all applicable legal requirements
• We take OWNERSHIP AND ACCOUNTABILITY for our individual and team performance
• We deliver what we promise to our CUSTOMERS, SHAREHOLDERS AND OTHER STAKEHOLDERS

Based in Johannesburg, South Africa, Sasol is listed on the New York and Johannesburg stock exchanges.
NORTH AMERICAN OPERATIONS

ARIZONA: The Tucson alumina facility produces both high-purity and ultra-high purity calcined alumina products used in high-purity ceramics and synthetic sapphire.

LOUISIANA: The Lake Charles Chemical Complex manufactures products used in the cleaning and personal care markets to produce ingredients for soaps, detergents, shampoos, cosmetics and more. We also manufacture specialty chemicals used in mild abrasives, thickeners and pharmaceuticals, as well as in the enhanced oil recovery markets.

PENNSYLVANIA: The production facility in Oil City manufactures antioxidants used in a variety of products such as fuels, lubricants, polymers, printing inks, food additives and pharmaceuticals.

TEXAS: Sasol’s North American Operations headquarters in Houston handles corporate administrative functions. Our Greens Bayou facility in Houston manufactures products used as starting materials in a wide array of chemical intermediates and finished products including resins, wire enamel solvents and antioxidants. Our plant near Winnie receives feedstock from the Greens Bayou plant to produce high purity meta cresol and para cresol using a proprietary process.

U.S. MEGA PROJECT
Sasol’s world-scale petrochemical complex is currently under construction adjacent to our existing site in Southwest Louisiana. The complex will triple the company’s chemical production capacity in the United States and enable it to build on its strong positions in robust and growing global chemical markets.

At the heart of the project is an ethane cracker that will produce 1.5 million tons of ethylene annually, benefiting from significant economies of scale. The complex also includes six chemical manufacturing plants.

The project will create more than 700 full-time jobs, more than 5,000 construction jobs at peak and thousands of indirect jobs in Louisiana and across the United States.

SUSTAINABILITY
Sasol recognizes our operations will be successful only if our communities share in our success and remain sustainable over the long term. Our commitment goes beyond plant operations and extends into neighboring communities where we work to develop and promote people-centered, long-term sustainable programs through the development of our corporate social investment initiatives.

Our outreach efforts focus on three key areas of need expressed by our employees and the community: education, the environment and small business development.
